

Colorado Wastewater Surveillance Data

Ouray County | Recent Trends

The Colorado Department of Public Health and Environment (CDPHE) Wastewater Surveillance Program collaborates with wastewater utilities to test for infectious pathogens, including COVID-19, Influenza, and Respiratory Syncytial Virus (RSV) in wastewater. These pathogens may be shed in the wastewater before someone shows any symptoms, and individuals without symptoms can also shed virus particles. Testing wastewater provides complementary surveillance data to existing systems.

View the most recent detection status for SARS-CoV-2, Influenza, and RSV below. SARS-CoV-2 is the virus that causes COVID-19. Learn more about the science in the FAQ link below the trends.

SARS-CoV-2	Influenza	RSV
 SARS-CoV-2 was not recently detected in wastewater samples from the last two weeks.	 Flu was not recently detected in wastewater samples from the last two weeks.	 RSV was not recently detected in wastewater samples from the last two weeks.

Last Sample Collected: 6/30/2025
